

TikTok-Style Live Commerce + Auction Platform

Development Proposal (App + Web)

Hello There,

Thank you for sharing the complete vision and detailed specifications for your platform. I carefully reviewed all the requirements you sent, including the TikTok-style social platform, live streaming, live shopping, auction system like Whatnot, coins and gifts economy, gamification, AI moderation, seller verification, and full admin management.

Your platform will be the combination of TikTok + TikTok Shop + Whatnot Auctions + Gamification, creating a powerful social commerce ecosystem for creators, sellers, and buyers.

Below is the complete proposal including features, development plan, infrastructure estimate, and timeline.

• **Platform Overview:**

We will build a complete ecosystem consisting of:

- Mobile App (Android + iOS)
- Web Platform
- Admin Dashboard
- Creator Dashboard
- Seller Dashboard

The platform will support:

- Live streaming & PK battles
- Live shopping
- Auction marketplace
- Coins & gifts economy
- Advertisement system

 25/06/2026
Qazi Shafiqul Haider
Founder & CEO
Naasmind Ltd.

- ***Key Features Implementation:***

TikTok-Style Platform:

- User profiles
- Follow / follower system
- Likes, comments, and shares
- Notifications system
- Creator/Seller dashboards
- Live streaming support

Live Streaming & PK Battles:

- Real-time live streaming (720p / 1080p)
- Viewer counters
- Live gift sending
- Coins system
- Countdown timers
- PK battle
- Leaderboards

Live Commerce (TikTok Shop Model)

Live selling features will include:

- Product showcase during live streams
- Add-to-cart while watching
- Secure checkout flow
- Order tracking
- Live buyer counter display

Seller requirements:

- Government business number
- Government ID verification
- SIN verification
- Mandatory live selling activity

Qazi Shafiqul Haider
Founder & CEO
Naasmind Ltd.

Auction Marketplace (Whatnot-Style)

Auction system will support:

- Live auctions with countdown timers
- Real-time bidding
- Product listing system
- Seller dashboards
- Automatic listing control

Auction rules implemented:

- Listing blur when auction expires
- Automatic removal after 3 failed auctions
- 1-month restriction before re-listing
- Seller approval required before re-listing

Qazi Shafiqul Haider
Founder & CEO
Naasmind Ltd.

Coins & Gifts Economy

Coins can be purchased in multiple packs for App and Web versions.

Creators will receive 60% revenue share after transaction fees.

Gift system includes:

- Glow Heart
- Star Wink
- Energy Shot
- Sonic Bloom
- Golden Wave
- Royal Throne
- Dragon Ascend
- Cosmic Empire

Gamification includes:

- Gift tier ladders
- VIP badges
- Weekly leaderboards
- Exclusive badges
- Special events (Mega battles & championships)

Revenue Model

Platform revenue streams:

- Gift commissions
- Coin purchases
- Product sales commission (7%)
- Creator subscription (\$7.99 monthly)
- Advertisements

Qazi Shafiqul Haider
Founder & CEO
Naasmind Ltd.

- Sponsored gifts
- Corporate promotions

Tax rules implemented:

- 13% HST on transactions
- Creator dashboards showing full breakdown including: App store fees
Google fees Taxes
Platform commissions

Advertisement System

Supported ad formats:

- Pre-roll ads
- Banner ads
- Host ads
- Interactive ads (every 15-20 minutes)
- Sponsored gifts
- Sponsored leaderboards
- Live commerce promotions

Admin can enable or disable these anytime.

AI Integration

AI modules will include:

- AI content moderation (nudity, scams, hate speech detection)
- AI analytics for engagement & product recommendations
- AI personal shopping assistant
- Voice activated shopping search

Qazi Shafiqul Haider
Founder & CEO
Naasmind Ltd.

Admin Panel

The admin dashboard will allow management of:

- Users
- Shops
- Streams
- Coins & gifts economy
- Fraud detection
- Content moderation
- Dispute management
- Advertisement management

Role-based access:

- Admin
- Moderator
- Support staff
- Dispute managers

Legal Compliance

During registration users must accept:

- Terms of Service
- Community Guidelines
- Seller Agreement
- Creator Agreement
- Coins & Gifts Policy
- Refund Policy
- Privacy Policy
- IP & Copyright Policy

Qazi Shafiqul Haider
Founder & CEO
Naasmind Ltd.

Development Plan:

For better workflow and transparency, the project will be divided into three milestones.

Milestone 1 – Branding & UI/UX Design

Brand Identity & UI/UX Design (Figma)

Timeline: 20 days

Cost: \$650

Includes:

- Mobile App UI
- Web platform UI
- Creator dashboard
- Seller dashboard
- Admin panel layouts
- Complete user flow

Total Timeline:

20 days

Total Cost:

\$650

Qazi Shafiqul Haider
Founder & CEO
Naasmind Ltd.

Milestone 2 – Front-end Development

Front-end development will be based on the finalized UI/UX design.

Timeline: 10 days

Cost: \$850

Includes:

- Mobile app interface implementation
- Web interface development
- UI animations and interactions
- Responsive layouts

Milestone 3 – Back-end Development

Back-end development based on finalized front-end.

Timeline: 15 days

Cost: \$1000

Includes:

- Database architecture
- Streaming integrations
- Coins & gifts economy
- Payment gateway integration
- Seller and auction system
- Admin dashboard backend

App Testing Timeline : 25 Days

Cost: \$400

Qazi Shafiqul Haider
Founder & CEO
Naasmind Ltd.

Total Project Summary:

Total Timeline: 70 days'

Timeline Days Total

Budget: \$2900 USD

Payment will be divided into milestones as described above.

Infrastructure Architecture Streaming architecture:

Creator Phone

Agora RTC

Media Server

Low Latency HLS

CDN

Viewers

Infrastructure Cost Breakdown Example:

- Agora (Interactive + Push): ~\$0.72 (60 mins \$0.012 total rate).
- Media Server: ~\$0.50 (Allocated hourly cost for a \$50/mo VM).
- CDN Egress: ~\$13.20 (1,100 GB @ \$0.012/GB, accounting for higher request overhead).

Total Cost 1 Seller, 1,000 Buyers Total: \$14.42 per hour

This provides a low-latency interactive live shopping experience for 1000 viewers.

Costs of Infrastructure may vary depending on viewer traffic and platform growth.

Qazi Shafiqul Haider
Founder & CEO
Naasmind Ltd.

After project completion:

- 6 months after-sales

Support includes:

- Bug fixes
- Minor technical adjustments
- Deployment assistance
- Basic performance checks

After that ongoing maintenance and technical support will be available for:

\$100 (USD) per month

Monthly support includes:

- Platform monitoring
- Bug fixes and stability improvements
- Minor feature adjustments
- Technical guidance
- Server or deployment assistance when required

Important Notes:

- All source code will be exclusive to your project
- You will have full intellectual property ownership
- No code will be copied from other projects
- NDA can be signed before development starts

You will provide:

- All API subscriptions
- Payment gateway accounts
- Infrastructure subscriptions (Agora, CDN, hosting)

Qazi Shafiqul Haider
Founder & CEO
Naasmind Ltd.

The Most Important Highlights:

Clients Requirements:

Fraud other problems and solutions:

1. Chargeback / friendly fraud:

Stripe Radar built into your stack already flags suspicious transactions. Implement delivery confirmation via EasyPost before releasing seller funds payment held in escrow until tracking shows delivered. Require photo proof of dispatch within 48 hours. Block buyers with 2+ chargeback history from bidding. For coin purchases, deliver coins instantly but flag same-device multiple purchases within 1 hour.

2. Return fraud and refund abuse:

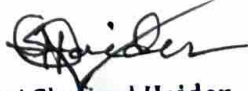

Require sellers to film every packing process for auction and mystery box items — 30-second pack video uploaded to platform before shipping. Buyer must submit photo of received item to initiate any return claim. Three-strike return fraud system — buyer banned from auctions after 3 fraudulent return attempts. For mystery boxes specifically — display item list on screen during live session so contents are publicly documented.

3. Fake / bot accounts and shill bidding:

Require phone verification for every bidding account — one phone number per bidder. Flag accounts created within 30 days of registration attempting to bid on auctions from same seller repeatedly. IP and device fingerprinting via Stripe Identity catches duplicate account creation. Admin dashboard flag when same IP address bids on same seller's multiple auctions within 7 days. Suspicious bid patterns trigger human review before payout released.

4. Counterfeit and misrepresented products:

Mandatory product sourcing declaration at listing — seller must select source country and supplier type. Random spot-check audits on your top 20% selling sellers monthly — request invoice or supplier proof. Health Canada prohibited ingredient database check for any beauty product listed. Buyer report button on every product listing with 3-click escalation to

Qazi Shafiqul Haider
Founder & CEO
Naasmind Ltd.

admin. Any counterfeit confirmed = immediate seller suspension and funds withheld pending investigation.

5. Cart abandonment at checkout:

One-tap checkout for returning buyers — saved card, saved address, single confirmation screen. Guest checkout available always — account creation optional after purchase. Show total price including HST and shipping before cart — no surprises at final step. Apple Pay and Google Pay integration — reduces mobile checkout to one biometric confirmation. Abandoned cart push notification within 15 minutes — "Your item from [Seller Name]'s live session is waiting." Three-email abandonment sequence recovers 10-14% of lost carts.

6. Impulse regret and buyer's remorse:

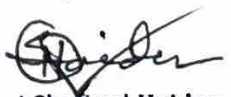

All auction sales final -clearly stated in pre-purchase terms shown during the auction session and confirmed at checkout. Seller must accurately describe every auction item on stream - vague descriptions void the all-sales-final policy. 24-hour grace period for items not yet shipped - buyer can cancel before dispatch for store credit only, not cash refund. This protects sellers while giving genuine mistake-buyers an exit that does not cost the platform chargeback fees.

7. Shipping delays destroying buyer trust:

Mandatory 48-hour dispatch requirement for all sellers - first strike warning, second strike suspension from live selling for 7 days, third strike permanent selling restriction. EasyPost integration generates prepaid label at point of sale - seller scans and ships, no manual label creation. Automated tracking update pushed to buyer at every shipping milestone. If seller misses 48-hour dispatch, platform automatically messages buyer with update and compensation coupon. Sellers who maintain 95%+ on-time dispatch rate get a "Fast Shipper" badge on their profile - visible trust signal to buyers.

8. Lost or stolen packages:

Mandatory shipping insurance on all orders above \$50 - EasyPost offers insurance at \$0.50-\$1.00 per \$100 of declared value. This cost is split —

Qazi Shafiqul Haider
Founder & CEO
Naasmind Ltd.

50% seller, 50% buyer built into shipping fee. Signature confirmation required for orders above \$150. Lost package SLA - platform investigation within 48 hours, refund or replacement issued to buyer within 7 days, insurance claim filed on seller's behalf. Clear policy published pre-purchase so both parties know the process.

9. Fake reviews and rating manipulation:

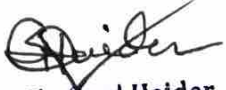

Reviews only from verified purchasers - impossible to review without a completed order linked to your account. Review gating - system prompts review submission 3 days after delivery confirmation, not before. Flag anomalies -seller receiving 15 reviews in 48 hours from accounts created within 30 days triggers automatic review hold pending admin verification. No seller can request review removal-only platform admin can remove demonstrably false reviews with documented evidence. Seller cannot see who left a review -removes intimidation incentive.

10. customer support response times:

Use AI for for this problem. Hard 4-hour response SLA during business hours for all support tickets at launch - achievable with 1–2 support staff at your initial scale. Tiered support - FAQs and chatbot for common questions, human escalation for disputes and payment issues within 4 hours. Every resolved dispute earns automatic follow-up message - "Was your issue resolved to your satisfaction?" -simple one-tap rating. Monthly support quality audit - any dispute taking over 48 hours to resolve reviewed personally by you. This personal oversight is your competitive weapon while you are small enough to wield it.

11. low viewers and no energy

Use AI or Platform bot viewers not fake buyers, but an automated system that joins new seller sessions and sends pre-written encouraging chat messages ("What's coming up next?" "Love that product!") during the first 10 minutes until real viewers arrive. Controversial but used by every major live platform during cold start including early TikTok. New seller discovery boost — every new seller's first 5 sessions are automatically featured in the app's discovery feed regardless of their follower count. Guaranteed minimum audience programme — your top 10 most engaged buyers

Qazi Shauqul Haider
Founder & CEO
Naasmind Ltd.

receive a push notification and 50 bonus coins for joining any new seller's first session. They become your professional warm-up audience.

12. Product misrepresentation on live stream:

Require sellers to show products under natural lighting, not just ring light, at least once per listing. Mandatory measurement disclosure for any fashion or home item - specific dimensions stated on stream and in listing. Encourage sellers to show slight imperfections honestly - counterintuitively this builds more trust and reduces returns than always showing items at their best. Buyer expectation management training module in your onboarding programme - teach sellers that accurate representation reduces returns more than it reduces sales.

13. Economy abuse and wash trading:

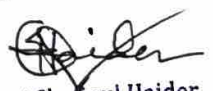

Gift velocity detection - flag any account sending gifts worth more than \$200 to a single seller within 24 hours. Device fingerprinting matches buyer and seller accounts created from same device - automatic flag for human review. Coin purchase limits - maximum \$500 in coin purchases per account per 24-hour period without identity verification step. Leaderboard audit-weekly manual review of top 10 gifters for anomalous patterns before publishing. Any confirmed wash trading results in permanent coin balance forfeiture and account termination for both accounts involved.

14. Overselling -selling items not in stock:

Mandatory pre-session inventory declaration -seller submits stock count per item before going live. Platform system caps order quantity at declared stock number automatically -when stock hits zero the buy button locks without seller intervention. Inventory dashboard in seller app shows real-time units remaining during live session. Overselling strike system - one occurrence is warning and mandatory training, second occurrence is 48-hour selling suspension, third occurrence is permanent selling restriction pending appeal.

15. Mobile checkout friction killing conversions:

Apple Pay and Google Pay as primary checkout options - single biometric confirmation. Saved payment method is default for returning buyers - one

Qazi Shaqul Haider
Founder & CEO
Naasmind Ltd.

tap checkout. Guest checkout requires only email and shipping address - credit card tokenized via Stripe for future use. Never ask for card details twice. Maximum 3 steps from add-to-cart to order confirmation. Progress indicator showing step 1 of 3 - removes uncertainty that there are more steps ahead. Test checkout flow on actual iPhone and Android devices weekly during development - not just simulators.

16. Stream technical failures during live session:

Second Hetzner CX22 as hot standby - automatic failover if primary media server goes offline. BunnyCDN already has global edge redundancy - HLS segments cached at multiple PoPs. Seller mobile backup - train every seller to have a second mobile device ready as backup stream source connected to Agora. Stream health monitor in seller dashboard - real-time bitrate, viewer count, latency indicators so seller knows before viewers that stream quality is degrading. If stream fails during active auction- automatic 5-minute extension added to auction timer when stream resumes, preventing unfair outcomes from technical interruption.

Next Step

Once your corporation registration and NDA are ready, we can schedule a Zoom meeting to finalize the milestone agreement and begin the design phase immediately.

I appreciate the opportunity to work on such an exciting platform and look forward to building this together.

Thank you.

Best regards.
